Innovation

Europe must lead the world in scientific and industrial innovation.

- **Science**
  Create an environment which fosters scientific progress which will result in tangible social benefits.

- **Regulation**
  Establish a future-proof EU regulatory framework which removes barriers to innovation and allows tomorrow’s technologies to be developed and launched in Europe first.

- **Infrastructure**
  Strengthen the links between scientific knowledge and industrial capabilities by encouraging partnerships that can support infrastructures for biotechnology to ensure efficient, impactful, and rapid progress.

- **Competitiveness**
  Provide companies with the appropriate tools, incentives, and frameworks to ensure they can compete globally.

- **Growth**
  Harness the innovation created by the healthcare biotechnology sector to unleash its economic potential, creating high-skill jobs and value for citizens.

- **Accessibility**
  Address regulatory barriers and other factors to improve accessibility of therapeutic innovations for the benefits of patients.
